EXPERIENCES

SYNDIAG

Turin, Italy

R&D AI Engineer

Jul 2024 – Present

- Led the implementation of state-of-the-art computer vision algorithms for early detection of ovarian cancer.
- Contributed across the AI life-cycle, from applied research to production deployment, with a focus on model performance and scalability.
- Design of data engine to automate ingestion and pre-processing of continuous data streams, enabling continuous model training.

TXT E-TECH @ LEONARDO

Turin, Italy

Software Engineer

Nov 2023 – Jul 2024

- Implemented machine learning algorithms to coordinate aircraft and drone movement in manned-unmanned teaming (MUM-T) scenarios.

AIKO SPACE

Turin, Italy

Software Engineer Intern

Mar 2020 – Jun 2020

- Developed a prototype software system for inter-process communication in mini-satellites, enabling flexible and configurable process startup.

SKILLS

Languages: Python | C | C++ | C# | SQL | Java | JavaScript

AI Libraries: PyTorch | PyTorch-Lightning | Keras | NumPy | Pandas | Scikit-Learn | SciPy

Development: Git | Docker | Kubernetes

EDUCATION

POLYTECHNIC OF TURIN

MS in Engineering | *Artificial Intelligence and Data Analytics*

2021 – 2023

- Main coursework: Advanced Machine Learning Methods, Reinforcement Learning, Deep Learning, Big Data, Game Design.

PROJECTS

ABSTRACT PAINTINGS GENERATOR (MASTER THESIS) | [Link](#) 📄

Nov 2022 - Jul 2023

- Developed a generative AI pipeline to create abstract paintings from classical music using SOTA Latent Diffusion Models and VQ-GANs. Leveraged Fully Sharded Data Parallel (FSDP)

A FOOL'S FATE (GAME DEMO) | [Project link](#) 📄

Oct 2023

- Designed and developed a 3D puzzle-platformer, including core game-play mechanics and controller systems. Composed and produced the full original soundtrack.

AUTOMATIC 3D SCENE GENERATION (PUBLICATION) | [Paper link](#) 📄

Sep 2021

- Implemented a Blender Add-on that, given a single image, generates a 3D scene from a 2D image resembling the environment.
